I run a delivery route for Bridgestone/Firestone, and the traffic updates and weater in the cities helps with trip planning. Alot of time is saved knowing what the traffic situations are in the cities i am traveling to. If i have to wait to tune into the local stations of that market, i will already be in the middle of the backup, or in the middle of the the stormy weather. That will place my vehicle , and the other XM subscriber vehicles in the traffic problems adding to the congestion. Please allow XM the ability to continue with local weather and traffic updates to help people who have plans to go into certain cities, the ability to make other arrangements to avoid weather and/ or traffic delays.
